

AMENDMENTS TO THE CLAIMS

A detailed listing of all claims that are, or were, in the present application, irrespective of whether the claim(s) remains under examination in the application are presented below. The claims are presented in ascending order and each includes one status identifier. Those claims not cancelled or withdrawn but amended by the current amendment utilize the following notations for amendment: 1. deleted matter is shown by strikethrough for six or more characters and double brackets for five or less characters; and 2. added matter is shown by underlining.

1. (Currently Amended) A lawn irrigation system comprising:
a frame;
a motor operably attached to the frame;
at least one drive wheel operably connected to the motor;
a sprinkler arm operably connected to the motor for dispersing water in a selected pattern;
and
a cover removably attached to the frame so that the cover at least partially covers the frame, the motor, and the at least one drive wheel so that the lawn irrigation system resembles an object other than a sprinkler.
2. (Cancelled)
3. (Original) The lawn irrigation system of claim 1, wherein the cover is in the shape of an automobile, monster truck, tank, pick-up truck, Indy car, or dragster.
4. (Cancelled)

5. (Original) The lawn irrigation system of claim 1, wherein the motor is water powered.
6. (Original) The lawn irrigation system of claim 1, wherein the motor is operable at more than one gear ratio.
7. (Original) The lawn irrigation system of claim 1, and further comprising a stop mechanism that enables flow of water through the lawn irrigation system to be substantially stopped.
8. (Original) The lawn irrigation system of claim 1, and further comprising at least one guide wheel operably attached to the frame.
9. (Original) The lawn irrigation system of claim 1, wherein the sprinkler arm is rotatable about a first axis, wherein the sprinkler arm comprises a pair of spray tubes that are each rotatable about a second axis that is substantially perpendicular to the first axis.
10. (Currently Amended) A method of fabricating a lawn irrigation system, the method comprising:
 - operably attaching a motor to a frame, wherein the motor is connectable to a water hose;
 - operably connecting at least one drive wheel to the motor;
 - operably connecting a sprinkler arm to the motor, wherein the sprinkler arm is capable of dispersing water in a selected pattern; and

removably attaching a cover to at least partially cover the frame, the motor, and the at least one drive wheel so that the lawn irrigation system resembles an object other than a sprinkler.

11. (Cancelled)

12. (Cancelled)

13. (Cancelled)

14. (Original) The method of claim 10, wherein the cover is formed in the shape of an automobile, monster truck, tank, pick-up truck, Indy car, or dragster.

15. (Cancelled)

16. (Original) The method of claim 10, and further comprising providing the motor with at least two gear ratios.

17. (Original) The method of claim 10, and further comprising operably attaching a stop mechanism to the motor, which enables flow of water through the lawn irrigation system to substantially stop.

18. (Currently Amended) A method of irrigating a lawn, the method comprising:
- fabricating a lawn irrigation system, comprising:
- operably attaching a motor to a frame
 - operably connecting at least one drive wheel to the motor;
 - operably connecting a sprinkler arm to the motor; and
 - removably attaching a cover to at least partially cover the frame, the motor, and the at least one drive wheel so that the lawn irrigation system resembles an object other than a sprinkler;
- connecting the motor to a water hose;
- flowing water through the motor and the sprinkler arm to cause the at least one drive wheel to rotate and thereby move the lawn irrigation system over the lawn; and
- dispersing water in a selected pattern from the sprinkler arm, wherein a person using the lawn irrigation system displays a fondness for a particular type of organization or group.
19. (Original) The method of claim 18, and further comprising:
- operably attaching at least one guide wheel to the frame;
 - orienting the water hose in a selected path on the lawn; and
 - irrigating the lawn by rolling the at least one guide wheel along the water hose.
20. (Original) The method of claim 18, wherein the cover is formed in the shape of an automobile, monster truck, tank, pick-up truck, Indy car, or dragster.

21. (Cancelled)

22. (Original) The method of claim 18, and further comprising providing the motor with at least two gear ratios.

23. (Original) The method of claim 18, and further comprising operably attaching a stop mechanism to the motor, which enables flow of water through the lawn irrigation system to substantially stop.
